

# ENVIRONMENTAL AND ENERGY MANAGEMENT POLICY

*Recognizing the inherent impacts on the environment which result from shipping operations, GasLog is committed to conduct its activities, both ashore and at sea, in an environmentally responsible manner.*

**In order to meet this objective it's important that we have a common understanding of what constitutes best environmental practices as well as the rules and regulations which govern us. So how do we do this?**

## **Embrace environmentally sound and energy efficient practices**

We need to apply this philosophy to all of our activities. When we plan our daily tasks on-board and ashore we will consider how to achieve the desired result using the minimum amount of energy. The Company's environmental and energy action plans provide guidance on best practices. Let's make sure we understand and follow them.

When we design or modify our vessels we will consider energy performance and explore the benefits of new technology.

Finally, instead of disposing let's recycle where practicable and feasible.

## **Learn and follow the rules**

In a regulatory environment that is constantly changing, we will ensure that we keep up to date and as a minimum comply with all applicable laws, regulations. At the same time we will reflect them in our management system so that they are easily understood and can be practically implemented

## **Think sustainably**

Each year we establish targets with the aim of improving our environmental impact. We must therefore have in place systems, processes and resources to report and analyze this information. We all need to play our part by reporting in a timely and accurate way. Our

underlying philosophy should be to: Report, Measure, Analyze, Improve.

## **Prevent unplanned events but be ready to address the unexpected**

It is vitally important that we avoid any oil/chemical spill and/or unintentional cargo emissions. We can achieve this by understanding the risks we manage, putting in place effective practices to mitigate these risks and being prepared to speak up if we see potential dangers.

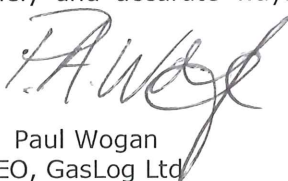

In the event that the unexpected does happen we need to be ready. Training as well as maintaining, reviewing and testing our contingency plans will improve our capabilities to respond effectively in case of an emergency and ensure we minimize any potential impact.

## **Choose the right solution and business partner**

In order to achieve our environmental objectives we aim to engage like-minded companies as customers, suppliers and service providers. Let's ensure we take this into account when selecting our partners and then work with them proactively to align our goals. In conclusion we are a company that is committed to good stewardship with the aim of minimizing our environmental impact. Acting in accordance with this policy will help us to ensure that we hand on the environment to the next generation in the best possible condition.
